

## *Research Paper / Links Project*

### *Engr 300*

*The research project* assignment presents you with an opportunity to investigate and nominate an individual, group of individuals, non-profit, or company to be a recipient of one of TheTech Museum of Innovation “Technology Benefitting Humanity” Awards.

The project should be twofold:

1. Actually go onto TheTech website and nominate your selection using their criteria. See: [TheTech Museum of Innovation Awards Nomination](#) for details.
2. Create an expanded version of the nomination utilizing HTML which will be posted on the course website. This expanded version should contain sections on:
  - a. Identify the technology application.
  - b. Explain how the technology application benefits humanity.
  - c. State why you think the nominee deserves recognition.

These are the same sections as on TheTech website, however I would like a greatly expanded version of these sections. You should reference your website in the nomination you make to TheTech.

*Database of Technology and Society Links:*

1. This project will consist of the student creating a database of at least 20 links. These links should be **quality** links dealing with Technology (ideally emerging technology) and their societal impact. The quality of the link will be judged by reputability of the source and its relevancy to emerging technologies and the societal issues involved with their development and use.

The links should not consist of newspaper articles unless they are permanent.

(Newspaper articles tend to go dead after a very short period of time.)

A sizeable database already exists and you will be adding to it.
